The bug

The following bug happened after I configured everything and it was smooth for admin to create mahara assignment activity in a Moodle course. However, when I logged in as a teacher role, I could not create a mahara assignment activity due to the following error:

*Exception - Class 'assignsubmission_maharaws\moodle_exception' not found
More information about this error*

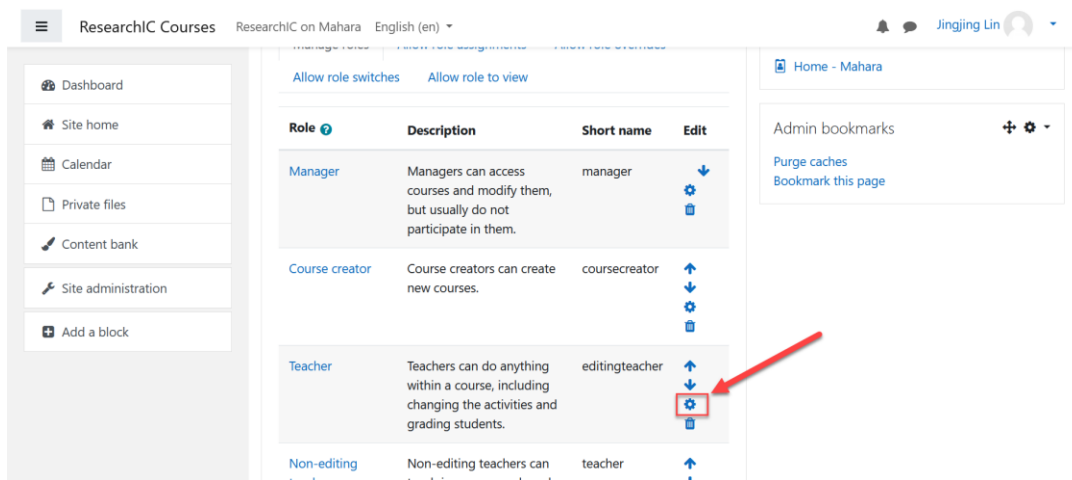

The solution

I resolved the problem by testing if I add “manager” role to a teacher, will the teacher be able to create a mahara assignment then?

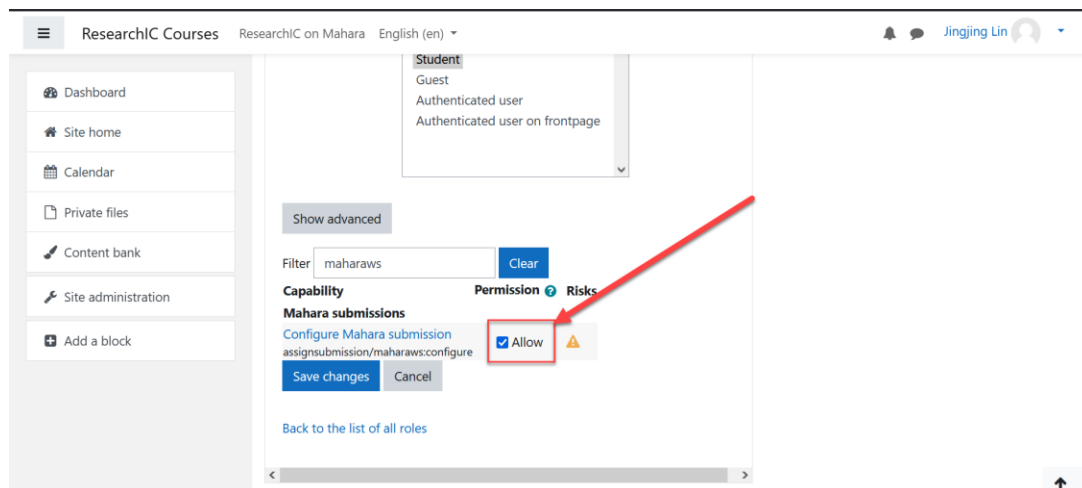

The result was positive.

It meant that teachers do not have the permission to

Site administration -> Users -> Permissions -> Define roles

Scroll down to Capability, and search for “Configure Mahara submission”. Check “Allow”. Click “Save changes”.

Now, the teacher is able to smoothly create a mahara assignment activity in her course in Moodle.
